Redistribute Artifacts to Bintray

Occasionally packages get corrupted when being distributed from Artifactory to Bintray and need to be resent. This guide details the process for redistributing a single package version from Artifactory to Bintray.

Step-by-step guide

1. Navigate to your Artifactory instance and open the Artifacts view.

2. Find the corresponding local release repository for your Bintray instance. This should be named similarly to `<project>-release-local`, or `libs-release-local`.

3. Expanding the repository, locate and select the specific package and version you'd like to resync.

4. In the top right corner of the detail box to the right, select **Distribute to Bintray** from the **Actions** menu.

5. Ensuring the correct Bintray Distribution repository is selected, **Distribute Artifacts Asynchronously**, **Publish Distributed Artifacts**, and **Overwrite Exiting Files**, select **Dry Run**.

6. If there are no errors from the Dry Run, select **Distribute**.

7. In a couple of minutes a non-corrupt copy of the package should exist in Bintray.
