

The Gerrit for Jira connector is not working

1. Scroll to the 'Gerrit Reviews' section of a JIRA
2. Select the '...'
3. Select 'Show All Reviews'
4. Select the '...'
5. Select 'Show All Issues'

Note that the user may need to toggle items a few times to force the connector to properly refresh.

If you are setting this for a new Jira, you need to generate an ssh key with:

ssh-keygen for Gerrit and Jira

```
ssh-keygen -t rsa -m PEM -b 4096
```

The ssh system Java uses requires a PEM key and that is not made by default. Now you can add this key to the LFID user in Gerrit and configure the MeetMe JIRA Gerrit Plugin.
