

# CLM Nexus IQ - The application ID is invalid error

## Problem

Jenkins CLM jobs fail before posting the report back to IQ.

The error looks like this:

```
12:09:33 java.lang.IllegalArgumentException: The application ID onap-so-adapters-so-etsi-sol003-adapter is invalid.
```

## Solution

This happens specially when a new repo is created or the name of the project was changed.

To resolve this:

1. Go into <https://nexus-iq.wl.linuxfoundation.org/>
2. Click "Orgs and Policies" in the top menu
3. Click on the project's org reporting the issue
4. Click on "+ New Application"
5. Add the new application with Application Name and Application ID matching "<org>-<project-name>" (In the case above "onap-so-adapters-so-etsi-sol003-adapter")
6. Re-run the CLM job.
